SONGWON is a leading manufacturer of antioxidants for polymers. New SONGNOX® 5057 extends SONGWON’s range of high-performance antioxidants. SONGNOX® 5057 is used in combination with hindered phenols such as SONGNOX® 1135 and SONGNOX® 1076 to protect polyols against degradation during storage and transportation. In addition, this combination prevents scorching (core discoloration) during the manufacture of flexible polyurethane foams.
SONGWON has established a range of aminic and phenolic antioxidants to meet the needs of the polyol and polyurethane industry.

SONGNOX® 5057 extends the breadth and depth of SONGWON’s antioxidant product range, meeting customer requirements in the polyol and polyurethane manufacturing industry.

**SONGNOX® 5057**

- complements SONGWON’s existing range of phenolic antioxidants, providing polyols and polyurethane with excellent protection against thermo-oxidative degradation.
- is designed for flexible polyurethane slabstock foams, elastomers and hot melt adhesives.
- is used in combination with hindered phenols such as SONGNOX® 1135 or SONGNOX® 1076 LQ by polyol and slabstock foam producers seeking less volatile alternatives to dibutylhydroxytoluene (BHT). These combinations help to:
  - protect polyols against oxidation during storage and transportation (degradation of the polyol and the urethane components causes changes in the physical and mechanical properties of the polyurethane foam).
  - prevent scorching, i.e., discoloration in the center of the foam, during manufacture of flexible polyurethane slabstock foams (scorching is caused by the exothermic reaction between polyols, diisocyanates and water. Since polyurethane is a good insulator, the foam center remains hot for several hours after foaming, increasing the risk of scorching).

**SONGNOX® 5721** is a liquid blend of SONGNOX® 5057 and SONGNOX® 1135 that is especially easy to incorporate in polyols.
SONGNOX® 5057 is widely used in the stabilization of polyols and polyurethanes both for industrial and automotive applications.

**Storage conditions**

SONGNOX® 5057 antioxidant is supplied in liquid (LQ) form.

The material should be stored indoors, in closed containers, in a dry place at temperatures between 5 and 40°C.

**Shelf life**

SONGNOX® products are stable for 24 months, provided they are stored under the conditions described above.
SONGWON provides customers with warranties and representations as to the chemical or technical specifications, compositions and/or the suitability for use for any particular purpose exclusively in individual written agreements.

The facts and figures contained herein have been carefully compiled to the best of SONGWON’s knowledge but are essentially intended for informational purposes only.

SONGWON Industrial Group does not accept any liability whatsoever for any information, reference or advice provided in this document or any similar SONGWON publication.
